What is Gardyn?

Gardyn.org is a web app to help beginner gardeners get up and running with their first garden. The initial version focuses on common and relatively easy to grow fruits and veggies such as tomatoes, peas and strawberries.

Like Sparknotes for gardeners, our app will give you the need-to-know information in a quick and easy to read format.

Why Gardyn is Valuable

While there are more comprehensive gardening encyclopedias out there our goal is to create something that is condensed and rapidly accessible to brand new gardeners. We cut out all the extra stuff, present the information in an easy to understand format (like Wikipedia and IMDb do for their respective niches) and help wanna-be gardeners get out in the dirt as quickly as possible.
